

Building additional road capacity may seem like an obvious solution to traffic congestion, but numerous studies have cast doubt on the \_\_\_\_\_ of that approach. Not only does additional road capacity often fail to relieve congestion, but it can also make traffic worse by encouraging more people to drive.

(B) highlight

(C) prolong

(D) rectify

   
*The Gleaners*, painted in the realist style by Jean-François Millet, depicts peasants picking stray wheat from a field after the harvest. The realists' emphasis on accurately portraying the experiences of average working people was largely a rejection of the romantic style evident in many paintings by Horace Vernet, which instead \_\_\_\_\_ their subjects' beauty or heroism while hiding all imperfection.

**5**  Mark for Review 

Which choice completes the text with the most logical and precise word or phrase?

(A) counteract

(B) obscure

(C) rectify

(D) accentuate

The following text is from Maria Amparo Ruiz de Burton's 1885 novel *The Squatter and the Don*. In the novel, Clarence and Mercedes develop a romantic relationship.

Mercedes, being not quite seventeen, her grief at parting from Clarence was wild, vehement and all-absorbing. But she had been trained to obedience, and her battles with the spirit always took place after she carefully locked her bedroom door. Then Clarence was wildly apostrophized, and a torrent of tears relieved the overcharged, aching heart.

6

Mark for Review

ABC

Which choice best states the main purpose of the text?

- (A) It emphasizes Mercedes's extreme insecurity.
- (B) It suggests that the magnitude of Mercedes's feelings are unusual for her age.
- (C) It provides background explaining why Clarence has left Mercedes.
- (D) It conveys how Mercedes handles her intense feelings about being separated from Clarence.

In 2023 literary scholar Jeremy Douglass cautioned technology investors and enthusiasts who predict conventional books' ultimate displacement by newer forms of media. Douglass observed that the concept of an "interactive" text is much older than technologists assume, extending back to the first time readers scratched notes into a text's margins. In addition, newer media, such as video games, haven't replaced older forms of entertainment, such as comic books, but rather exist alongside them. Douglass believes that rather than supplanting books, technology is simply making new forms of expression possible.

7

Mark for Review

Which choice best describes the function of the underlined portion in the text as a whole?

- (A) It explains the basis for the claim made by the technologists mentioned in the text.
- (B) It suggests that academics are better suited than investors to see the potential uses of contemporary interactive texts.
- (C) It challenges the stance of the investors and enthusiasts who are mentioned earlier in the text.
- (D) It provides a historical anecdote about the technological challenges involved in reading the earliest interactive texts.

Businesses selling clothing and other fashion items face obstacles in trying to forecast how much product to order: tastes and styles change quickly, while manufacturing clothing takes a significant amount of time.

Researchers Youran Fu and Marshall Fisher have found that combining sellers' own data with information gathered from social media can dramatically improve the accuracy of such forecasts—by 24 to 57 percent in the cases they directly studied. Better predictions mean demand is easier to meet without retailers becoming overstocked.

8

Mark for Review

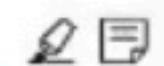

ABC

Which choice best states the main idea of the text?

- (A) Becoming overstocked is the main preoccupation of sellers trying to forecast demand for fashion items.
- (B) Social media is revolutionizing how both sellers and researchers view the fashion industry.
- (C) Using multiple data sources can enhance the ability of sellers in the fashion industry to anticipate demand.
- (D) Retailers can use their own data to accurately predict how tastes and styles are evolving.

Women like Grace Murray Hopper made important early contributions to the history of US cryptology, a field concerned with secure data communication and storage. Hopper was a US naval admiral and computer scientist who coined the term “debugging” and invented the first compiler program for translating computer code. In this way, Hopper and others like her helped make it possible for more women—such as Anna Lysyanskaya, who currently works in and teaches digital cryptography—to enter the field of cryptology.

9

Mark for Review

According to the text, what is one similarity between Hopper and Lysyanskaya?

- (A) They both founded organizations that encourage women to pursue careers in cryptology.
- (B) They both have contributed to the field of cryptology.
- (C) They both have worked in the field of history.
- (D) They both have argued that more US schools should teach the history of cryptology.

The following text is from Jerome K. Jerome's 1889 novel *Three Men in a Boat (To Say Nothing of the Dog)*. The narrator and two friends are taking a boat down the River Thames in England.

In a boat, I have always noticed that it is the fixed idea of each member of the crew that he is doing everything. Harris's notion was, that it was he alone who had been working, and that both George and I had been imposing upon him. George, on the other hand, ridiculed the idea of Harris's having done anything more than eat and sleep, and had a cast-iron opinion that it was he—George himself—who had done all the labour worth speaking of.

10

Mark for Review

Which choice best states the main idea of the text?

- (A) The narrator recognizes that Harris's and George's attitudes are typical of how crew members view their own contributions on boats.
- (B) The narrator has recognized that Harris spends most of his time eating and sleeping.
- (C) Everyone in the group has been given tasks to do, but the narrator hasn't been willing to complete his.
- (D) The amount of work that needs to be done on the boat is likely more than the narrator, George, and Harris can handle.

Total Areas of Five Tribal Nations around the United States

Tribal nation	Location	Area (square miles)
Crow Tribe	Montana	3,606
White Earth Nation	Minnesota	1,167
Tohono O'odham Nation	Arizona	4,453
Choctaw Nation	Oklahoma	10,864
Yakama Nation	Washington	2,188

In terms of total area, the Choctaw Nation is one of the largest tribal nations in the United States. It covers 10,864 square miles in what is now southeastern Oklahoma. In comparison, the total area of the White Earth Nation in Minnesota is only \_\_\_\_.

11

Mark for Review

Highlights &amp; Notes More

The following text is adapted from Guy de Maupassant's 1884 short story "A Recollection," from the collection *Guy de Maupassant Short Stories* (translated by Albert M.C. McMaster et al. in 1903). The narrator is taking a boat down the Seine river from Paris, France, to the surrounding countryside.

I took up a position in the bows [front of the boat], standing up and looking at the quays, the trees, the houses and the bridges disappearing behind us. And suddenly I perceived the great viaduct of Point du Jour which blocked the river. It was the end of Paris, the beginning of the country, and behind the double row of arches the Seine, suddenly spreading out as though it had regained space and liberty, became all at once the peaceful river which flows through the plains, alongside the wooded hills, amid the meadows, along the edge of the forests.

9

Mark for Review

Based on the text, which choice best expresses the narrator's characterization of the Seine?

- (A) As the journey progressed from Paris to the countryside, the waters of the Seine gradually cleared.
- (B) The Seine is similar to Paris in that it is beautiful and slow to change.
- (C) The waters of the Seine are more confined and rough in Paris than they are in the countryside.
- (D) The current under the arches of the Point du Jour contrasts starkly with the otherwise calm flow of the Seine throughout the journey.

Water flowing around an obstruction creates vortices (patterns of swirls) of varying size; by detecting the vortices, fish can determine the size and position of the obstruction. Testing by Yuzo R. Yanagisuru, Otar Akanyeti, and James C. Liao using models of three head shapes—narrow (low ratio of width to length), intermediate, and wide (high ratio of width to length)—showed that for large vortices, fish with intermediate heads would be better able than wide-headed fish to distinguish between vortices and general turbulence in the water. A second research team has therefore hypothesized that in low-visibility conditions, intermediate-headed fish will be more likely than wide-headed fish to detect obstructions that create large vortices.

10

Mark for Review

ABC

Which finding, if true, would most directly support the second research team's hypothesis?

(A) A study using obstructions that created large vortices in low-visibility conditions found that the intermediate-headed black sea bass (*Centropristes striatus*) bumped into the obstructions just as often as the wide-headed *Synodontis macropunctata* did.

(B) A study using obstructions that created large vortices in low-visibility conditions found that the wide-headed *Synodontis macropunctata* bumped into obstructions more often than the intermediate-headed black sea bass (*Centropristes striatus*) did.

(C) A study using obstructions that created large vortices in low-visibility conditions found that some specimens of the intermediate-headed black sea bass (*Centropristes striatus*) bumped into the obstructions more often than other

Water flowing around an obstruction creates vortices (patterns of swirls) of varying size; by detecting the vortices, fish can determine the size and position of the obstruction. Testing by Yuzo R. Yanagisuru, Otar Akanyeti, and James C. Liao using models of three head shapes—narrow (low ratio of width to length), intermediate, and wide (high ratio of width to length)—showed that for large vortices, fish with intermediate heads would be better able than wide-headed fish to distinguish between vortices and general turbulence in the water. A second research team has therefore hypothesized that in low-visibility conditions, intermediate-headed fish will be more likely than wide-headed fish to detect obstructions that create large vortices.

- (A) A study using obstructions that created large vortices in low-visibility conditions found that the intermediate-headed black sea bass (*Centropristes striates*) bumped into the obstructions just as often as the wide-headed *Synodontis macropunctata* did.

- (B) A study using obstructions that created large vortices in low-visibility conditions found that the wide-headed *Synodontis macropunctata* bumped into obstructions more often than the intermediate-headed black sea bass (*Centropristes striates*) did.

- (C) A study using obstructions that created large vortices in low-visibility conditions found that some specimens of the intermediate-headed black sea bass (*Centropristes striates*) bumped into the obstructions more often than other specimens of the same fish did.

- (D) A study using obstructions that created large vortices in low-visibility conditions found that the *Synodontis macropunctata*, which has a relatively wide head, bumped into more than half of the obstructions.

A film studies student is researching early 20th-century film serials, which consisted of individual episodes of a single long story that were shown weekly in theaters. *Clancy of the Mounted* is a 1933 serial that, over its 12 episodes, kept its audience interested with the suspense and drama that are typical of the northern adventure genre. The student, however, claims that ultimately audiences of the time preferred resolution and closure over ongoing tension.

11

 Mark for Review

Which finding, if true, would most directly support the student's claim?

- (A) The 12th episode of *Clancy of the Mounted* was the most expensive episode of the series to produce.
- (B) The 12th episode of *Clancy of the Mounted* was viewed by more people than was any previous episode in the series.
- (C) Modern critics generally regard the first episode as the best installment of *Clancy of the Mounted*.
- (D) Audiences of the time considered *Clancy of the Mounted* to belong to a genre other than the northern adventure genre.

The *Reckoning and Resilience* (2022) exhibition at Duke University's Nasher Museum of Art in Durham, North Carolina, is dedicated to the work of thirty North Carolina artists, including Juan Logan, Cornell Watson, and Stephen Hayes. Although the Nasher Museum has focused exhibitions entirely on North Carolina artists before, as it did previously in the photography exhibition *Across County Lines*, the breadth of disciplines in *Reckoning and Resilience* sets it apart.

12

Mark for Review

Which finding, if true, would most directly support the underlined claim?

- (A) *Reckoning and Resilience* and *Across County Lines* were curated to emphasize works that are not owned by the Nasher Museum.
- (B) The Nasher Museum has a world-class collection of contemporary art that includes many paintings and sculptures from artists both inside and outside North Carolina.
- (C) Logan is a painter, Watson is a photographer, and Hayes is a sculptor.
- (D) Watson is a North Carolina photographer, as were all of the artists featured in *Across County Lines*.

Rafael Núñez and colleagues studied how members of the Yupno, an Indigenous group in Papua New Guinea, conceptualize time. The researchers recorded Yupno speakers explaining certain temporal words and phrases, such as *kalip si ngan*, a past-oriented expression that translates to “a long time ago,” and coded each speaker’s manual gestures. Previous research has found a tendency in many cultures to make temporal distinctions using spatial concepts and gestures, particularly along egocentric axes (i.e., relative to the orientation of the speaker): for instance, English speakers often refer to the front/back axis to describe events in time. In an anthropology paper, a student claims that the tendency toward ego-based conceptualizations of time is universal.

13

Mark for Review

Which finding, if true, would most directly weaken the student’s claim?

- (A) Some Yupno grammatical structures used when talking about time are also used in English.
- (B) When Yupno speakers who are outdoors use gestures to refer to the future, they point uphill from their current location regardless of which way they are facing.
- (C) A Yupno speaker points in opposite directions when indicating a past event versus a future event.
- (D) Although Yupno speakers and English speakers both use gestures to indicate orientation in time, Yupno speakers tend to use fewer gestures overall when speaking than English speakers do.

Over 600 languages are spoken in New York City in addition to English—one can find Acehnese spoken in the neighborhood of Astoria, for example, or Hindi in Gramercy Park. English is the most common, with 65% of New Yorkers speaking it at home; Spanish is second, at 20%. A linguist hypothesizes that a Spanish dialect—a variation differing from the parent language in some of its vocabulary, pronunciation, and grammar—has developed in New York City, partly due to its linguistic interaction with English. Previous research shows that younger speakers of nonmajority languages are more likely to borrow words from the majority language of a region than are older speakers. If the linguist's hypothesis is correct, it is therefore likely to be the case that \_\_\_\_\_.

14

Mark for Review

Which choice most logically completes the text?

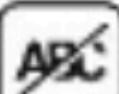

- (A) younger speakers of Spanish in New York City would be more likely to use a dialect specific to New York City than older speakers living in the same neighborhood would be.
- (B) the proportion of younger speakers who use a Spanish dialect specific to New York City is higher in neighborhoods where many languages are spoken than in neighborhoods where Spanish and English predominate.
- (C) both the number of languages spoken in New York City and the number of dialects of each of those languages will increase over time.
- (D) Spanish used by younger speakers in New York City tends to have more words borrowed from other nonmajority languages than borrowed from English.

Arthurian legends (tales related to the character of King Arthur) derive from many sources, such as *Preiddeu Annwfn*, composed around 900, and *Erec and Enide* from around 1170. One of the most significant sources, Geoffrey of Monmouth's *History of the Kings of Britain*, was written in Latin in the 1130s; some material from it was later adapted by the Norman poet Wace into the *Roman de Brut* in 1155. But while no source before 1155 includes references to the famous Round Table at which Arthur's knights assembled, both the *Roman de Brut* and Sir Thomas Malory's 15th-century compilation of Arthurian legends, *Le Morte d'Arthur*, do. It can therefore be inferred that \_\_\_\_\_.

15

Mark for Review

Which choice most logically completes the text?

- (A) Malory did not use *Preiddeu Annwfn* as a source for information he presented about the Round Table.
- (B) Geoffrey of Monmouth was unaware of stories of the Round Table when composing his *History*, though historians know that works containing such stories were available to him.
- (C) *Le Morte d'Arthur* is more historically accurate than *History*, because *Erec and Enide* had not been written when Geoffrey of Monmouth was writing his work.
- (D) Geoffrey of Monmouth's accounts of Arthurian legends in his *History* are more similar overall in content to the accounts in *Erec and Enide* than they are to the accounts in *Roman de Brut*.

An analysis by Alain Elayi and colleagues of coins minted in Sidon in the fifth and fourth centuries BCE reveals a change in their composition over time: while a coin from circa 450 BCE contains about 98% silver and 1% copper, a coin from 367 BCE (the end of Ba'alšillem II's reign) contains 74.2% silver and 24.7% copper, giving it a relatively yellowish appearance that traders would have noticed. Because coins with a silver content below 80% were widely considered unsuitable for trade, Elayi et al. speculate that a crisis in confidence in the currency occurred in Sidon around 367 BCE, which was likely relieved—despite Sidon's persistent oppressive financial obligations—as a result of Ba'alšillem II's successor Abd'aštart I's decision to

16

Mark for Review

Which choice most logically completes the text?

- (A) keep the amount of silver in Sidonian coins consistent with that in coins minted in 367 BCE but decrease their weight.
- (B) proclaim that the percentage of silver in coins suitable for trade would be raised to a threshold higher than 80%.
- (C) fund the mining of some copper deposits that were not available to Ba'alšillem II.
- (D) begin minting heavier coins with a proportion of silver to copper similar to that in coins minted in 367 BCE.

While researching a topic, a student has taken the following notes:

- Chromosomes are cellular structures that contain genes.
- Genes carry critical instructions for determining an organism's physical traits.
- Members of the same species typically have the same number of chromosomes.
- The bat-eared fox (*Otocyon megalotis*) and the Bengal fox (*Vulpes bengalensis*) are species of foxes.
- The bat-eared fox has seventy-two chromosomes.
- The Bengal fox has sixty chromosomes.

**24**

Mark for Review

The student wants to specify how many chromosomes the bat-eared fox has. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A)** The bat-eared fox (*Otocyon megalotis*) and the Bengal fox (*Vulpes bengalensis*) both have chromosomes, but the bat-eared fox has more than the Bengal fox does.
- (B)** The Bengal fox, a species of fox, has sixty structures called chromosomes.
- (C)** The bat-eared fox's chromosomes contain genes, which are critical to determining an organism's physical traits.
- (D)** The bat-eared fox (*Otocyon megalotis*) has seventy-two chromosomes.

- At London and New York Fashion Weeks, fashion designers debut new clothing collections.
  - Color consultants create trend reports on the popular colors at a given Fashion Week.
  - A report on 2018 London Fashion Week noted the popularity of a light green-yellow shade that was cool in tone and soft in intensity.
  - A report on 2019 New York Fashion Week noted the popularity of a deep brown shade that was warm in tone and rich in intensity.

25

Mark for Review

Which choice most effectively uses information from the given sentences to describe a color that was popular at 2019 New York Fashion Week?

- (A) Shades of light green-yellow and deep brown have both been featured in Fashion Week reports prepared by color consultants.
  - (B) The shade favored by designers at 2019 New York Fashion Week was a departure from the cool, soft shade of light green-yellow that had proved popular at 2018 London Fashion Week.
  - (C) Each Fashion Week, color consultants compile reports on the colors that have been popular among designers.
  - (D) At 2019 New York Fashion Week, many designer collections featured a warm, rich shade of deep brown.

While researching a topic, a student has taken the following notes:

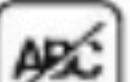

- The fifth Solvay Conference on Physics was held in 1927.
- It brought together twenty-nine of the era's preeminent scientists to discuss the emerging field of quantum theory.
- The conference famously featured a debate between physicists Albert Einstein and Niels Bohr.
- Bohr proposed that subatomic entities like electrons had only probable realities until they were observed.
- Einstein argued that subatomic entities like electrons had a reality independent of observation.
- Bohr's position, later called the Copenhagen interpretation, remains the most widely accepted theory of quantum mechanics.

26

Mark for Review

The student wants to place Einstein's argument within its historical context. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) During the dawn of quantum theory, Einstein maintained the independent reality of some subatomic entities, although Bohr's opposing interpretation would become the widely accepted view.
- (B) In 1927, Einstein and Bohr engaged in a famous debate; Bohr's argument, later called the Copenhagen interpretation, would remain popular decades after.
- (C) The attendees of the 1927 Solvay Conference were among the preeminent scientists of their era, including Einstein, who opposed Bohr's proposal.
- (D) At the 1927 Solvay Conference on Physics, Einstein disagreed

Highlights &amp; Notes More

While researching a topic, a student has taken the following notes:

- The Mohs scale of mineral hardness is a ten-point scale that orders minerals by hardness based on their ability to scratch other minerals.
- Minerals with larger numbers are harder than minerals with smaller numbers and can leave visible scratches on them.
- Minerals with smaller numbers are softer than minerals with larger numbers and cannot leave visible scratches on them.
- The mineral calcite has a Mohs scale number of 3.
- The mineral apatite has a Mohs scale number of 5.
- The mineral corundum has a Mohs scale number of 9.

27

Mark for Review

The student wants to make a generalization about minerals. Which choice most effectively uses relevant information from the notes to accomplish this goal?

- (A) Based on their Mohs scale numbers, corundum (9) is harder than apatite (5), and apatite is harder than calcite (3).
- (B) Corundum can leave visible scratches on calcite, which is why corundum has a higher number than calcite on the Mohs scale of mineral hardness.
- (C) Any mineral with a Mohs number of 9, like corundum, can scratch a mineral with a Mohs number of 5, like apatite.
- (D) The Mohs scale can be used to order calcite, corundum, and apatite by their ability to scratch other minerals.
